

DBMS

Segment: 01

Important Theory Question

Database vs File System:

1. What is the difference between a database system and a file system?
2. How does a database system ensure atomicity and concurrency?

Data Abstraction:

1. What is data abstraction? Write down the benefits of data abstraction.
2. How does data abstraction help simplify database management?

Storage Manager Functions:

1. What are the functions of different components of the storage manager?
2. Describe the role of the storage manager in DBMS.

Keys in DBMS:

1. Compare Primary key, Super key, Candidate key, and Foreign key.
2. Explain with examples how database management systems resolve redundancy and atomicity problems.

Data Models and Their Importance:

1. What is a data model? Give examples of some popular data models.
2. Compare between DDL and DML.
