

Oracle Database

Chapter 02 (Practice Problem Solve)

The HR department needs your assistance with creating some queries.

1. Due to budget issues, the HR department needs a report that displays the last name and salary of employees who earn more than \$12,000. Place your SQL statement in a text file named lab_02_01.sql. Run your query.

SQL

```
SELECT last_name, salary
FROM employees
WHERE salary > 12000;
```

2. Create a report that displays the last name and department number for employee number 176.

SQL

```
SELECT last_name, DEPARTMENT_ID
FROM employees
WHERE EMPLOYEE_ID = 176;
```

3. The HR departments needs to find high-salary and low-salary employees. Modify lab_02_01.sql to display the last name and salary for any employee whose salary is not in the range of \$5,000 to \$12,000. Place your SQL statement in a text file named lab_02_03.sql.

SQL

```
SELECT last_name, salary
FROM employees
WHERE salary NOT BETWEEN 5000 AND 12000;
```

4. Create a report to display the last name, job ID, and start date for the employees with the last names of Matos and Taylor. Order the query in ascending order by start date.

SQL

```
SELECT last_name, job_id, hire_date
FROM employees
WHERE last_name IN ('Matos', 'Taylor')
ORDER BY hire_date ASC;
```

5. Display the last name and department number of all employees in departments 20 or 50 in ascending alphabetical order by name.

SQL

```
SELECT last_name, department_id
FROM employees
WHERE department_id IN (20, 50)
ORDER BY last_name ASC;
```

6. Modify lab_02_03.sql to display the last name and salary of employees who earn between \$5,000 and \$12,000 and are in department 20 or 50. Label the columns Employee and Monthly Salary, respectively. Resave lab_02_03.sql as lab_02_06.sql. Run the statement in lab_02_06.sql.

SQL

```
SELECT last_name AS Employee, salary AS "Monthly Salary"
FROM employees
WHERE salary BETWEEN 5000 AND 12000
AND department_id IN (20, 50);
```

7. The HR department needs a report that displays the last name and hire date for all employees who were hired in 1994.

SQL

```
SELECT last_name, hire_date
FROM employees
WHERE hire_date BETWEEN '01-JAN-94' AND '31-DEC-94';
```

8. Create a report to display the last name and job title of all employees who do not have a manager.

SQL

```
SELECT last_name, job_id
FROM employees
WHERE manager_id IS NULL;
```

9. Create a report to display the last name, salary, and commission of all employees who earn commissions. Sort data in descending order of salary and commissions.

SQL

```
SELECT last_name, salary, commission_pct
FROM employees
WHERE commission_pct IS NOT NULL
ORDER BY salary DESC, commission_pct DESC;
```

10. Members of the HR department want to have more flexibility with the queries that you are writing. They would like a report that displays the last name and salary of employees who earn more than an amount that the user specifies after a prompt. (You can use the query that you created in practice exercise 1 and modify it.) Save this query to a file named `lab_02_10.sql`. If you enter 12000 when prompted, the report displays the following results:

SQL

```
SELECT last_name, salary
FROM employees
WHERE salary > &salary_amount;
```

12. Display all employee last names in which the third letter of the name is *a*.

SQL

```
SELECT last_name
FROM employees
WHERE last_name LIKE '__a%';
```

13. Display the last name of all employees who have both an *a* and an *e* in their last name.

SQL

```
SELECT last_name
FROM employees
WHERE last_name LIKE '%a%' AND last_name LIKE '%e%';
```

If you want an extra challenge, complete the following exercises:

14. Display the last name, job, and salary for all employees whose job is sales representative or stock clerk and whose salary is not equal to \$2,500, \$3,500, or \$7,000.

SQL

```
SELECT last_name, job_id, salary
FROM employees
WHERE (job_id = 'SA_REP' OR job_id = 'ST_CLERK')
AND salary NOT IN (2500, 3500, 7000);
```

15. Modify lab_02_06.sql to display the last name, salary, and commission for all employees whose commission amount is 20%. Resave lab_02_06.sql as lab_02_15.sql. Rerun the statement in lab_02_15.sql.

SQL

```
SELECT last_name, salary, commission_pct  
FROM employees  
WHERE commission_pct = 0.20;
```
