**International Islamic University Chittagong**  
 Department of Computer Science & Engineering  
 Program: B. Sc. in CSE  
 Mid-Term Examination, Autumn-2025

Course Code: **ECON-3501**  
 Time: 1 Hour 30 Minutes

Course Title: **Principles of Economics**  
 Full Marks: 30

- (i) Answer all the questions. The figures in the right-hand margin indicate full marks.  
 (ii) Course Learning Outcomes (COs) and Bloom's Levels are mentioned in additional columns.

**Course Learning Outcomes (CLOs) of the Questions**

|      |                                                                                                                           |
|------|---------------------------------------------------------------------------------------------------------------------------|
| CLO1 | Demonstrate knowledge of the fundamental concepts and theories of micro and macro-economics.                              |
| CLO2 | Identify the key indicators of economic growth and how to use the indicators for national and international comparisons.  |
| CLO3 | Identify and explain the key macroeconomic policies.                                                                      |
| CLO4 | Use economic theories and concepts to analyze behavior of individuals, firms and nations to act as a responsible citizen. |

**Bloom's Level of the Questions**

| Letter Symbols | R        | U          | A     | An      | E        | C      |
|----------------|----------|------------|-------|---------|----------|--------|
| Meaning        | Remember | Understand | Apply | Analyze | Evaluate | Create |

**Answer the following questions**

|           |   |                                                                                                                                                                                                                                                                                                            |     |    |   |
|-----------|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----|---|
| Q1        | a | What do you understand by Economics and Equilibrium? Discuss the Free Market Hypothesis.                                                                                                                                                                                                                   | CO1 | U  | 4 |
|           | b | Make a brief discussion on the goals of Economics.                                                                                                                                                                                                                                                         | CO1 | R  | 4 |
|           | c | What are the basic economic problems?                                                                                                                                                                                                                                                                      | CO1 | R  | 2 |
| <b>OR</b> |   |                                                                                                                                                                                                                                                                                                            |     |    |   |
|           | a | Discuss the opportunity cost in terms of production possibility curve and why it is concave to the origin?                                                                                                                                                                                                 | CO1 | U  | 4 |
|           | b | How would you describe the context scarcity and choice addressing the central problems of economics.                                                                                                                                                                                                       | CO1 | R  | 4 |
| Q2        | a | Describe Law of Demand and Law of Supply. You are given the following demand and supply function. Using these function prove the statement you provided in the Law of Demand and Supply by deriving Demand Schedule, Supply Schedule, Demand Curve and Supply Curve.<br>$Q_d = 20 - 2p$<br>$Q_s = -2 + 3p$ | CO2 | An | 5 |
|           | b | How the elasticity differs with different types of goods (inferior, luxurious etc.), and also describe the cross elasticity with an example.                                                                                                                                                               | CO2 | E  | 5 |
| Q3        | a | Define Production and Production Function. Discuss the Cobb Douglas Production Function with its properties.                                                                                                                                                                                               | CO2 | E  | 5 |
|           | b | Define the indifference curve and how does it relate with the concept of marginal utility.                                                                                                                                                                                                                 | CO2 | An | 5 |

**International Islamic University Chittagong**  
**Center for General Education (CGED)**

**Midterm Examination: Autumn 2025**  
**Course Code: GEHE-3601**

**Program: Undergraduate**  
**Course Title: History of Emergence of Bangladesh**  
**Full Marks: 30**

**Time: 1 hours and 30 minutes.**

**Instructions:**

- i. All Questions are Compulsory.
- ii. Figures in the right margin indicate full marks.
- iii. Course Learning Outcome (CLO) and Bloom's levels are mentioned in additional columns.

| Bloom's Levels of the Questions. |          |            |       |         |          |        |
|----------------------------------|----------|------------|-------|---------|----------|--------|
| Letter of Symbol                 | R        | U          | App   | An      | E        | C      |
| Meaning                          | Remember | Understand | Apply | Analyze | Evaluate | Create |

| Text of the Questions |                                                                                                                                                                                                                                                                                                                                                                                                               | Marks | Bloom's Level | CLO  |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|---------------|------|
| 1                     | Sketch the river system of Bangladesh. How can maximize the use of river resources for the sustainable development of the country?                                                                                                                                                                                                                                                                            | 10    | An            | CLO1 |
| 2                     | Critically analyze the important factors that led to the partition of India and the emergence of Pakistan in 1947. Evaluate the role of communal politics in shaping this historical event.<br>Or<br>Language Movement of 1952 was a new Chapter in terms of identity of the Bengali Nationalism." Analyze the significances of the language movement and its various stages in the light of above statement. | 10    | An            | CLO2 |
| 3                     | Write short notes on <b>any two</b> of the followings:<br>a) Major Physiographic Units of Bangladesh<br>b) Ethnology of the people of Bangladesh<br>c) Geographic impact on the life and society of Bangladesh                                                                                                                                                                                                | 10    | U             | CLO2 |

# International Islamic University Chittagong

Department of Computer Science and Engineering

B. Sc. in CSE

Mid Term Examination, Autumn-2025

Course Code: CSE 3631

Time: 1 hours 30 minutes

Course Title: Operating System

Full Marks: 30

(i) The figures in the right-hand margin indicate full marks

(ii) Course Outcomes are mentioned in additional Columns

[Answer the questions from the followings]

1. a) What are the main components of a computer system? Briefly describe each with proper diagram. CO1 3

- b) Define a Real-Time Operating System (RTOS). Briefly differentiate between a Hard Real-Time System and a Soft Real-Time System, providing specific application and example for each. CO1 3

- c) System calls represent the fundamental interface between a running application (user mode) and the Operating System kernel (kernel mode). Systematically analyze the concept of System Calls, detailing the mechanism of their execution, their necessity, and their classification based on the services they provide. CO1 4

or Spooling is a core technique employed by Operating Systems to manage peripheral devices, especially in the context of print services and batch processing. Critically analyze the role, mechanism, and importance of Spooling in modern operating systems.

2. a) The Process Control Block (PCB) serves as the 'identity card' and 'storage container' for every process in an Operating System. Systematically analyze the structure, function, and importance of the PCB in facilitating the core services of the OS, particularly process switching and scheduling. CO2 4

- b) Imagine a busy Football turf with five teams waiting to use the field. CO2 6

| Student:          | Arrival Time: | Burst Time (Initial) | Burst Time (Remaining) |
|-------------------|---------------|----------------------|------------------------|
| Real Madrid       | 12:05PM       | 20 minutes           | 10 minutes             |
| Manchester United | 12:10PM       | 10 minutes           | 5 minutes              |
| Barcelona         | 12:15PM       | 30 minutes           | 9 minutes              |
| Bayern Munich     | 12:20PM       | 5 minutes            | 6 minutes              |
| Liverpool         | 12:25PM       | 7 minutes            | 3 minutes              |

i) Schedule the Football turf using Shortest Remaining Time First (SRTF) Scheduling Algorithm. Calculate the average waiting time.

ii) Draw a gantt chart using Round Robin Scheduling Algorithm. Assume that CPU Time Slice: 3 minutes.

3. a) An industrial temperature control system performs these tasks periodically:

CO2 6

| Task   | Name                | Period (ms) | Execution Time (ms) | Deadline (ms) |
|--------|---------------------|-------------|---------------------|---------------|
| Task A | Temperature Sensing | 30          | 6                   | 30            |
| Task B | Pressure Regulation | 60          | 10                  | 60            |
| Task C | Display Update      | 120         | 20                  | 120           |

Illustrate the schedule using Rate Monotonic Scheduling (RMS) and check whether the system meets its deadlines.

- b) Semaphores are an essential synchronization tool used by Operating Systems to solve the Critical Section Problem and manage concurrent access to shared resources. Describe the structure and operation of Semaphores and evaluate their strengths and weaknesses as a synchronization mechanism.
- or Compare and contrast monolithic, layered and microkernel operating system structures in terms of performance, reliability, and design complexity.

Autumn 2025  
Course Title: Data Communication  
Time: 1 hour 30 minutes

|    |                                                                                                                                                                                                                                                                                                                     | M | C | D |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|---|
| 1. |                                                                                                                                                                                                                                                                                                                     |   |   |   |
| a) | Describe the functions of each of the layers of ISO-OSI model.                                                                                                                                                                                                                                                      | 5 | 1 | 2 |
| b) | List the components of data communication? Describe how accuracy, jitter, delivery and timeliness affect the overall quality of data transmission.                                                                                                                                                                  | 5 | 1 | 1 |
| 2. |                                                                                                                                                                                                                                                                                                                     |   |   |   |
| a) | What do you mean by transmission impairments? How can transmission impairments be mitigated?.                                                                                                                                                                                                                       | 5 | 2 | 3 |
| b) | If signal and noise powers are equal, find $SNR_{dB}$ ? Assume that $SNR_{dB} = 36$ and Channel bandwidth is 1 Mhz. Find the appropriate bit rate and signal level?                                                                                                                                                 | 5 | 2 | 3 |
|    | OR                                                                                                                                                                                                                                                                                                                  |   |   |   |
| b) | Define throughput and latency? What should be the total delay for a 2.5 KB (kilobyte) message if the bandwidth is 1Gbps. Assume that distance between sender and receiver is 12000 Km and light travels at $2.4 \times 10^8$ m/s. [Here queuing delay is 0.000003 s and processing delay is same as queuing delay.] | 5 | 2 | 3 |
| 3. |                                                                                                                                                                                                                                                                                                                     |   |   |   |
| a) | Construct digital signals for the following line coding schemes using the bit stream 01001100011: (i) NRZ-I (ii) Manchester (iii) Differential Manchester (iv) Bipolar AMI (v) Pseudoternary                                                                                                                        | 5 | 2 | 4 |
| b) | If the loss of a cable is labeled as -1.5 dB/km, what will be the power at point P2 in the following link? Assume that y is the last digit of your ID, and the power at point P1 is 1y mW, as shown in the figure below.                                                                                            | 5 | 2 | 4 |
|    | <p>p1= 1y mW                      +3 dB                      +3 dB                      p2= ? mW</p> <p>4 km                      3 km                      1 km</p>                                                                                                                                                |   |   |   |
|    | OR                                                                                                                                                                                                                                                                                                                  |   |   |   |
| b) | In data transmission, what types of unguided transmission media are used? Briefly describe their types with suitable examples.                                                                                                                                                                                      | 5 | 2 | 4 |

International Islamic University Chittagong

Department of Computer Science & Engineering

Program: B. Sc (Engg.) in CSE Semester: 6<sup>th</sup>

Mid-Term Examination, Autumn 2025

Course Code: CSE-3641

Course Title: Software Engineering

Time: 1 hour and 30 minutes

Total Marks: 30

[Answer all the questions. Figures in the right-hand margin indicate full marks.]

|                                                                                                                                                                                                                                                                                                                                                                                                                               | Marks | CO  | DL |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-----|----|
| Q.1. a. Explain the Software Development Process, outlining its main phases such as requirement analysis, design, implementation, testing, and maintenance. Support your answer with a well labeled diagram to illustrate the flow of activities.                                                                                                                                                                             | 3     | CO1 | C3 |
| b. Define Agile Software Development and explain how it differs from traditional models. In your opinion, what are the key advantages or limitations of adopting Agile in real world projects?                                                                                                                                                                                                                                | 2     | CO2 | C5 |
| c. Discuss the importance of Software Testing in ensuring quality and reliability of applications. Imagine you are responsible for fixing a critical bug in a large system describing your step by step debugging approach, from identifying the issue to validating the solution.                                                                                                                                            | 5     | CO3 | C6 |
| Q.2. Read the passage and answer questions a, b and c:<br>A software company is developing an AI-based healthcare monitoring system that requires <u>continuous updates</u> based on patient feedback, <u>integration of evolving medical guidelines</u> , and <u>rapid adaptation to regulatory changes</u> . The system must also maintain high reliability and availability, as failures could have critical consequences. |       |     |    |
| a. Which software process model would be most suitable for this project? Justify your choice by analyzing the system's requirements against the strengths and limitations of at least two other models.                                                                                                                                                                                                                       | 5     | CO1 | C5 |
| b. How would you structure the verification and validation activities within your chosen model to ensure the system meets its dependability and regulatory compliance requirements?                                                                                                                                                                                                                                           | 3     | CO3 | C6 |
| c. Identify one potential ethical or professional responsibility challenge that the development team might face in this context and propose a mitigation strategy.                                                                                                                                                                                                                                                            | 2     | CO4 | A2 |

Or

|                                                                                                                                                                                                                                                                                                                                                                                                                                                              |   |     |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|-----|----|
| Q.2. a. A municipal authority is developing a real-time adaptive traffic control system to reduce congestion using live camera feeds, IoT sensors, and predictive analytics. The system must integrate with legacy traffic lights, respond to emergency vehicle priority, and remain operational 24/7. Analyze why Agile-DevOps is more suitable than Waterfall or V-Model for this project, based on scalability, integration needs, and failure tolerance. | 5 | CO1 | C5 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|-----|----|

- b. Design a verification and validation strategy within Agile-DevOps to ensure system reliability during peak hours and safe fallback to manual mode during outages. Include specific testing types, automation tools, and monitoring metrics. 3 CO3 C6
- c. During deployment, you discover the system disproportionately prioritizes affluent neighborhoods due to biased training data. As a professional engineer, what is your ethical responsibility? Propose one actionable step to mitigate this. 2 CO4 A2
- Q.3 a. A software company struggles with delayed project delivery and poor requirement analysis. Identify these two challenges and suggest effective ways to overcome them. 5 CO2 C5
- b. Recall your last project (academic or professional). Mention a major obstacle you faced and explain how your role or contribution helped achieve success. 5 CO4 A2
